## SUCTION UNIT

The suction unit is provided with a volumetric vacuum pump with tri-lobe rotors which can reach very high airflow and waterlift levels

A safety filter guarantees the maximum protection for both motor and pump The electrical panel is suitable for remote control and a push-button is installed on the chassis as standard

2 sets of filtering sleeves work continuously and alternatively. Doing so, they guarantee the maximum filtration efficiency and protection for the motor The filter is cleaned by an automatic system with backwash of the chambers. Compressed air is provided by an onboard compressor.

Integrated butterfly valve for discharge The material is safely and quickly discharged by means of a lever The unit is manufactured with thick painted steel for improved sturdiness and long-lasting lifetime

On request, other automatic discharge systems are available
